

Managed Security Services (MSS) For Enterprise Protection

Crosslin Technologies is a Managed Security Services Provider and IT security consulting firm. We offer the network security services your company needs in the new threat environment to ensure security readiness and regulatory compliance. Crosslin Technologies has extensive experience delivering effective solutions for GLBA, FFIEC, PCI/DSS, SOX, and HIPAA-HITECH related institutions and businesses across all industries. Thanks to that experience, our customers have access to the unique and valuable skill set behind our Managed Security Services. Our integrated solutions ensure your company's on-going readiness and compliance in today's information-rich environments.

Comprehensive Service Offerings to Reduce Security Risk

Unified Threat Management Services (UTM)

UTM provides multiple security features in a single platform to protect against attacks, viruses, Trojans, spyware, and other malicious threats. We can deliver multiple layers of protection in an integrated appliance to simplify risk management further.

Managed Firewall Services (MFS)

- 24/7/365 real-time management and monitoring
- Comprehensive and custom reporting
- Customer portal for any-time access

Intrusion Protection and Detection Services (IDS, IPS)

- Enhanced network protection of a real-time solution that controls internal and external threats, including network-based application vulnerabilities and exploits that could compromise your network.

Gateway Antivirus/Antispyware (GAV/GAS)

- Real-time protection against the latest threats including viruses, Trojans, worms, spyware, and other malicious code.
- Guards against application layer and content-based attacks when combined with Intrusion.

Web Content Filtering (WCF)

- Content filtering services to manage your institution's internet traffic and restrict websites your employees might visit
- Allows the creation of enterprise-wide or individual policies
- Advanced social networking controls available

Virtual Private Network (VPN)

- Ensures confidentiality and secure communications
- Supports current generation IPsec or SSL connections

Managed Vulnerability Scanning (MVS)

MVS provides a comprehensive view and the ability to scan network assets from within the corporate network. Our proprietary scanning engine tests for thousands of vulnerabilities on an automated or ad hoc basis.

Managed Security Information and Event Management (SIEM)

Crosslin Technologies proprietary SIEM solution delivers end-to-end monitoring of your entire network, internal to external. SIEM collects, analyzes, and stores logs from network devices, servers, and applications and provides log integration and analysis for more effective identification and mitigation of security threats.

ADVANTAGES

- 24/7 Monitoring
- Staffed to respond quickly to security events day or night
- A single monthly fee for hardware, maintenance and service updates
- Security Policy Changes reviewed and validated by Crosslin Technologies engineers
- Annual SSAE16-SOC1/SOC3 Audits (Formerly SAS 70 - Type II)
- Management and monitoring of third-party security platforms

INDUSTRIES SERVED

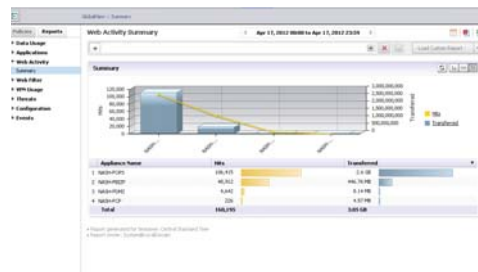

- Banking and Financial Services
- Healthcare
- Government
- Technology
- Retail
- Marketing
- Education
- Manufacturing

CROSSLIN
TECHNOLOGIES

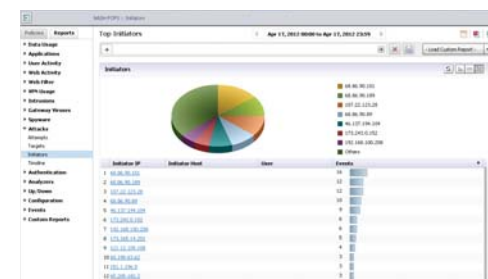

FIREWALL MANAGEMENT SERVICES

Crosslin Technologies firewall management reports reveal information on amounts, types, and destinations of traffic as well as firewall information like CPU, memory utilization, and number of connections. Optional firewall device logs are available to ensure compliance requirements are met and to support administrative duties.

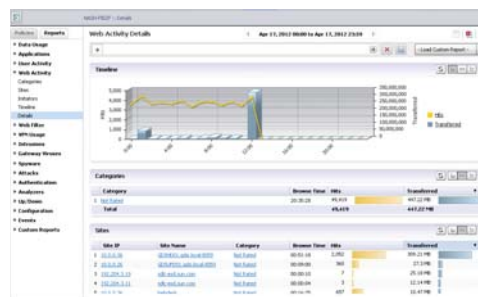

IDS/IPS

Our Intrusion Protection service reports show data about detected and blocked intrusion attempts, information regarding attack targets, and the country and IP addresses of the initiators.

WEB CONTENT FILTERING

Crosslin Technologies web content filtering reports provide information on web sites visited, web site category views, IP addresses, blocked access attempts, traffic timelines, and more details. Our web content filtering service offers a flexible, cost-effective solution for policy compliance and layered security.

GATEWAY ANTI-VIRUS AND ANTI-SPYWARE

Gateway protection service reports feature information on the devices in your organization attempting to access infected content, as well as traffic from currently infected users. Our Gateway protection reports provide detailed information on the quantities and the viruses and spyware versions that are successfully blocked along with a comprehensive summary.

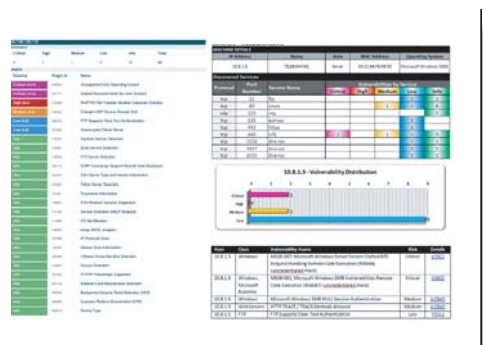

MANAGED SIEM

Our Managed SIEM reports provide "Top 10" notices for various events and alarm categories, as well as trending views. Industry specific compliance reporting and business impact and risk analyses are also available. Vulnerability scanning comparison analysis and reporting is an option with multiple scanners.

MANAGED VULNERABILITY SCANNING

Our custom reporting options include multiple views related to patch levels and up-to-date vulnerability information. Reporting can also include CIS (Center for Internet Security) compliance views and sensitive content configuration audit reports are also available. Other optional compliance audit reports include PCI, Anti-Virus and Virus detection.

Crosslin Technologies is Your Trusted MSS Provider

Crosslin Technologies' goal is to deliver Information Security and secure data center/cloud hosting solutions to compliance-intensive industries including but not limited to banking and other financial institutions, healthcare companies, technology firms, and others. Crosslin Technologies offers an established methodology of a broad range of human and network vulnerability testing services, managed security services, and other managed hosting and assessment services.

Crosslin Technologies is a managed IT services provider and consulting firm with services including information security and risk management consulting, vulnerability assessments and penetration testing, forensics, managed IT services, and managed communications. With extensive experience delivering effective solutions for GLBA, FFIEC, PCI DSS, SOC 1, 2 and 3, and HIPAA-HITECH-related institutions, Crosslin Technologies offers customers a unique and valuable skill set behind managed services.

Our firm's extensive experience managing a variety of networking and security related devices includes, but is not limited to:

- CISCO
- Dell
- EMC
- Fortinet

Crosslin Technologies offers security options to fit any budget. Whether your company wants the newest and most powerful technology our industry has to offer or you would like a proposal to manage an existing service/appliance within your network, we welcome the opportunity to serve you!
